## Press release

### Card for telephone systems saves up to 95 percent in mobile charges

The Berlin based company Junghanns.NET GmbH presents their GSM PCI interface card for telephone systems, which allows companies to make free of charge calls to GSM networks. "Companies can save up to 95 percent, because only basic fees apply for mobile calls." says Jens-Uwe Junghanns, salesmanager of Junghanns.NET GmbH. "Initial costs will usually be compensated within one month by saved charges."

Junghanns.NET GmbH uses free intranetwork calls, which almost all mobile providers offer in certain rates. The GSM-PCI-card allows the use of up to four different SIM-cards. It is easily integrated into an existing Asterisk PBX and routes calls using the most costeffective SIM-card. "The caller just dials a number and the telephone system decides automatically through which SIM-card the call is routed", says Junghanns. "Although free calls into the PSTN are possible, since mobile providers offer flatrates for PSTN, too."

Additionally the software coming with the cards allows "Callback" making calls from the mobile free of charge. The caller dials his accessnumber and hangs up. The the PBX initiates a callback to his mobile phone and provides a local dialtone to him. "Even international mobile calls can be free", explains Junghanns. "Companies just have to route calls between their locations through the internet and use the free intranetwork calls in the countries called."

### About the GSM-PCI card

The GSM-PCI-card is available in three versions, for one, two and four GSM channels. It is inserted into a standard PCI slot in a PC and after installation of Linux and the free software Asterisk becomes a PBX. In Asterisk it is possible to program callback and other rules for dialing.

### About Junghanns.NET GmbH

Junghanns.NET was founded in 1999 by the brothers Jens-Uwe and Klaus-Peter Junghanns. They programmed the first CAPI-Driver for Asterisk. The solutions of Junghanns.NET combine PSTN, Voice-over-IP and mobile networks and are in use in over 6.000 major installations worldwide.
