Press Release

snom technology and Junghanns.NET expand collaboration

snom technology, manufacturer of VoIP phones, and VoIP solution provider Junghanns.NET announce the expansion of their partnership at the CeBIT 2007. Through this closer cooperation the two Berlin companies guarantee top-quality IP telephony on the basis of open source software.

In a first step, snom and Junghanns.NET concentrate on the well-known open source PBX software Asterisk and, primarily, address its European users with their specific specifications and requirements, focussing on professional and private users as well as on the steadily growing Asterisk community. The goal of the partnership is a stable package solution for the use on landline and mobile phone nets under Asterisk.

"With our Voice over IP telephones, snom has been supporting open source solutions for many years," says Dr. Michael Knieling, snom's Executive Director for Sales and Marketing. "With their software and products, Junghanns.NET makes the professional use of Asterisk in Europe possible and opens new perspectives for us with regard to our customers."

Thanks to the partnership, Junghanns.NET with their software BRIstuff is now able to offer their customers and Asterisk users all functionalities of the snom phones. "From our point of view, where the quality is concerned the telephones made by snom are the best available for Voice over IP and Asterisk," says Jens-Uwe Junghanns, one of the founders of Junghanns.NET GmbH. "We set great store on having our software remain open source. With snom we have found a partner who supports this idea and allows the Asterisk community access to high-quality telephony."

About Junghanns.NET

The Berlin company Junghanns.NET GmbH was founded in 1999 by the brothers Jens-Uwe and Klaus-Peter Junghanns. They programmed the first CAPI driver which makes ISDN cards usable for Asterisk. The solutions of Junghanns.NET GmbH consolidate landlines, internet telephony, and mobile phone nets with BRIstuff software and today are in use in more than 50,000 PBXs worldwide.

About snom

snom technology AG develops and manufactures Voice-over-IP (VoIP) telephones and related equipment based on the IETF open standard, SIP (Session Initiation Protocol). Recognized for its high quality, customizable and cost-effective business solutions, snom is also differentiated by the company's ten-year history in the VoIP industry, and its dedication to high security standards. All of snom's software exists in the firmware on the phones - making it easier for users to download updates and new features. snom customers benefit from the interoperability and flexibility that the snom telephones offer, including plug and play integration and universal compatibility with any SIP-based telephony platform.
